

December 6, 2010

Rick Sparacio  
Elite Electric  
1850 Humboldt Road, Suite 69  
Chico, CA 95928

Dear Rick:

I thought you'd appreciate some feedback on the USES installation now that we've had roughly six months of actual experience under varying production scenarios. You will recall that Elite installed (10) USES units (480 volt, 3 phase) including additional surge, spike and lightning protection of 30,000 joules for virtually all our plant electronic equipment and controls. As promised, Elite completed this installation by July 12, 2010, just in time to provide us with some cost savings benefits during our typical peak usage in the summer months.

I'm pleased to report that Diversified Printers calculated a monthly savings of close to 17% during the first three months of operation with the USES system. During the last 90 days operations have slowed somewhat, but the latest figures are still showing a savings of roughly 15% from what costs we would have incurred had we not installed the system.

Based on our experience so far, we anticipate that our actual ROI will be better than the original projected ROI of 24 months. Obviously, we're very pleased with the outcome.

Sincerely,

Ken Bittner  
President / CEO  
Diversified Printers, Inc.
