

May 17, 2016

Dear Sir/Madam,

This letter is being written as a testimonial to the many benefits the Holiday Resort & Spa Guam has received from installing The USES Technology in September 2015.

As part of our 2015 property improvement, the USES Technology was installed first to provide full protection against the potential damages of surges and spikes for all our new equipment and new LED lighting. The USES Technology is also providing voltage stabilization, phase balancing, harmonic reduction and improved power factor as well as approx. 11% in combined energy reduction, power factor improvement credit and reduced maintenance cost monthly since it was installed, resulting in a less than 12 months return on investment.

Without the USES Technology, all of our other investments for energy improvements would have been subject to the many unpredictable power issues in Guam that could otherwise damage our new equipment or shorten its lifespan. We also look forward to the increased lifespan of all our previous electronics, controls, elevators, equipment and motors as a result of the USES Technology.

Soon we will be installing the USES Technology at many of our other properties as we have been very impressed with its performance meeting or exceeding all its projections by 1<sup>st</sup> Green Solutions Guam, LLC. Our USES Technology was also installed and has been maintained in a very professional manner.

I would not hesitate to recommend 1<sup>st</sup> Green Solutions Guam, LLC installing the USES Technology for its many benefits of the highest quality power protection, full spectrum power conditioning and energy savings.

Sincerely,

Ronnie Barque  
Director of Engineering  
Holiday Resort and Spa Guam
