

To Whom It May Concern,

In March 2011, our clubhouse facility was impacted by a serious power outage in the area. Many homes and businesses were disrupted. Fortunately for us, the USES power conditioning and energy efficiency system from Team Energy, LLC was installed prior to this outage. As a result, we experienced no loss of data or harmful effects to our computers, electronic devices, or office equipment. Surge and spike protection from the USES system enabled us to resume operations, once HECO restored power to the community.

Even more impressive, our utility bills have been reduced on average of about 15% per month. With escalating utility costs in Hawaii, the results have greatly exceeded our expectations, as the anticipated pay-back period for the system is well ahead of the two years promised when the system was engineered for our facility.

Anyone seriously considering ways and means to reduce their energy consumption should consider the USES products for power conditioning, power factor correction, and KW demand/KWh consumption reduction.

We are quite pleased with this investment and highly recommend these energy saving devices for your place of business.

This energy savings system does work and we are excited to offer our wholehearted endorsement of these products.

Sincerely,

Daryl Akiyoshi | CHA
