

POWERSHAVER/USES

When we purchased our new home, we were not prepared for the large electrical bills every month. We began researching for ways to reduce our monthly electrical costs.

In our search for ways to save electrical power, we came across Power shaver. It appeared to be the solution that we were looking for to make our home energy efficient. Even though we were a bit skeptical, we had the Power shaver unit installed. Our next electrical bill was reduced dramatically. It far exceeded our expectations. The unit paid for itself in less than six months. Our bills are continually 25% to 30% less every month depending on usage. If you are interested in saving electrical power every month, we highly recommend one or more of these units in every home and business.
