

PRIVATE ICE INC. USES SYSTEM PERFORMANCE SUMMATION FROM RECORDINGS DATED JUNE 19, 2018 PER TIMED-INTERVAL-SAMPLING (TIS)

The Amprobe DM II Pro Data Logger recorded graphs on June 19, 2018 with (2) XL-3D 480volt USES units installed at their Main Distribution Panel during the period of 3:30PM to 4:00PM at 5-minute intervals. (See individual graphs calculations for averages).

GRAPH TITLE	USES OFF(per ave. calcs)	USES ON(per ave. calcs)	Change
APPARENT POWER (kVA)	175.1	155.5	-19.6 kVA
CURRENT (Amps per phase)	221.3	194.4	-26.9Amps
REACTIVE POWER (kVAR)	81.9	34.4	-47.5 kVAR
LINE-TO-NEUTRAL VOLTAGE (Volts)	264.5	267.3	+2.8 Volts
TRUE POWER FACTOR (%)	88.4	97.5	9.1 Points

Notes:

1. During the time of this recording, the plant was running at normal full load according to the plant's staff as both USES units were observed to be "on."
2. Due to load changes during the TIS, data from 3:30PM to 3:40PM was not included in the above averaging. Inclusion of data during startup, erratic, or inconsistent operations usually yield inaccurate results.

SAVINGS CALCULATIONS

PRIVATE ICE REDUCTION FORMULA

Ampere Reduction x $\sqrt{3}$ (or 1.732) x Line-to-line voltage x New Power Factor x Time = kWh

26.9 (Amps) x 1.732 x 463 (Volts) x 0.975 (PF) x 1(hr) = 21030.6 Wh or 21.03 kWh for 2 USES units in operation

$$\begin{aligned} \text{Generated kWh per USES unit} &= 21.03 \div 2 \text{ D-USES units} \\ &= 10.51 \text{ output per D USES unit.} \end{aligned}$$

PROJECTED vs. ACTUAL kWh OUTPUT PER UNIT

	<u>PROJECTED KWH</u>	<u>ACTUAL KWH</u>
XL-D 480V	6.00	10.51

ACTUAL REDUCTION CALCULATION @ 100% 30-days/20-hour OPERATION

$$\begin{aligned} (2) \text{ XL-3D Units} \times 10.51 \text{ kWh} \times 30\text{days} \times 20\text{hours} &= 12,612.0 \text{ kWh (Total per month)} \\ \times \frac{\text{P}}{\text{P}} &\quad 6.78 \text{ (Average rate based on received power bills)} \\ &\underline{\quad \text{P} \quad} \quad \underline{\quad 85,509.36 \quad} \text{ Monthly Savings} \end{aligned}$$

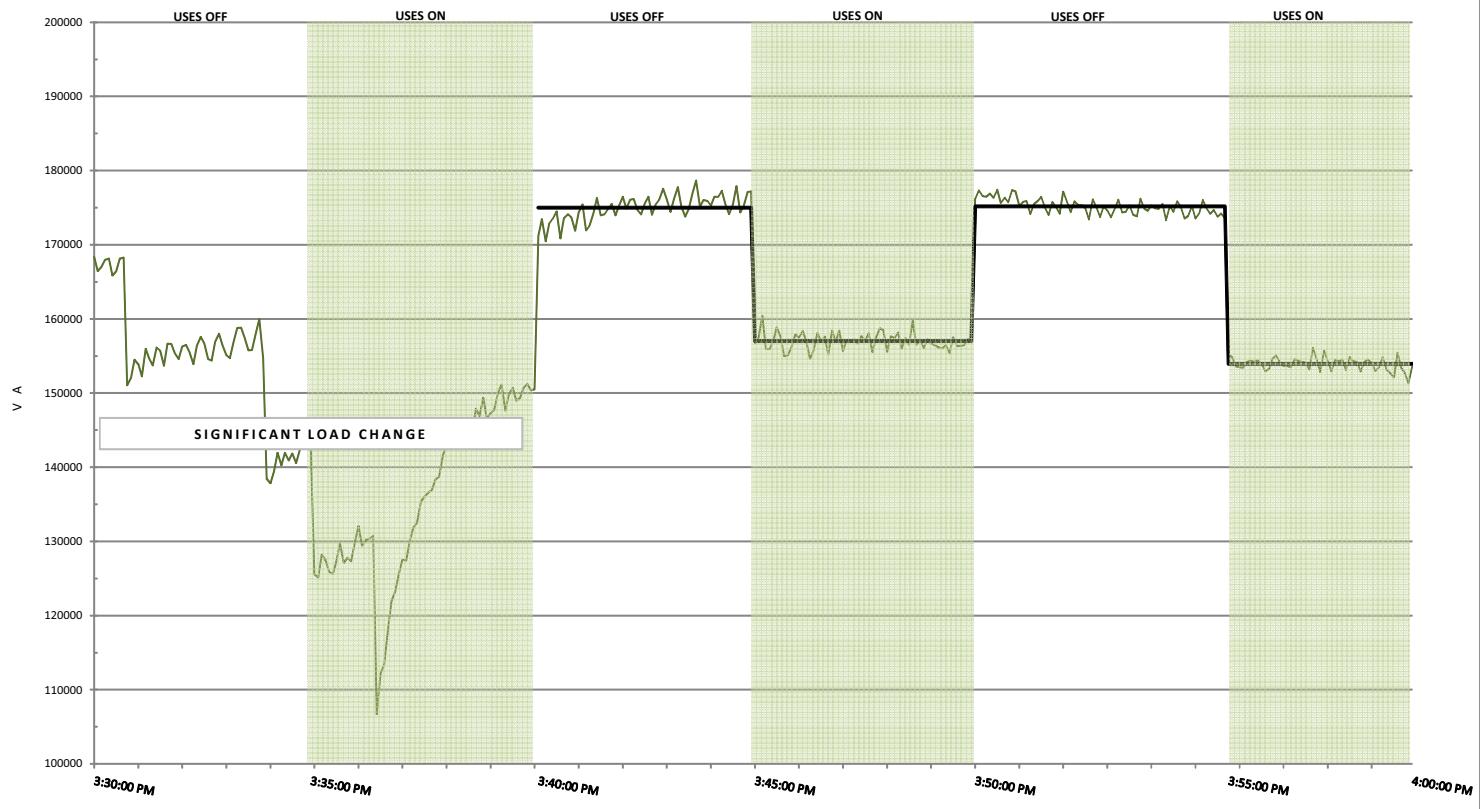

Previous power bills were before the water filtration system was installed. The water filtration system pumps will add to the power bill. Therefore, there will be a reduction in kWh from the USES system and an increase in kWh from the water filtration system.

Additional savings from reduced maintenance, extended motor life and all electronics protection from voltage stabilization, phase balancing, harmonic current reduction and surge, spike, lightning protection will also be substantial yet incalculable.

The KW comparisons and graphs are not used for this summation due to the fact that the data logger does not measure KW same as the utility meter.

All data is based on the loads and operation hours per day per above information. All reductions are based on the total number of USES units in operation times number of hours each USES unit is operating.
